

the brand name Heliocare, this range of both topical (creams, sprays and compacts) and oral tablets are all uniquely formulated with fernblock extracted from P-leucotomos. Studies have shown that P-leucotomos in Heliocare acts as an effective anti-oxidant by quenching superoxide anions (one of the most harmful reactive oxygen species 5 c p 1487 Gomez) as well as singlet oxygen, lipid peroxides, and the hydroxyl radical. Heliocare inactivates the harmful effects of ROS to reduce cellular damage and photo-ageing. This anti-oxidant effect, can promote better DNA repair enzymes and may prevent long-term skin damage and even skin cancer. Heliocare with P- leucotomos has also been shown to have a novel anti-ageing effect and can directly stimulate type I and type V collagen fibres in the skin, in addition to its indirect effects of preserving fibroblasts and preventing solar elastosis and structural changes in the dermis. Heliocare can also provide additional protection against UV-induced damage by preserving Langerhans cells of the skin and inhibiting the formation of thymidine dimers (lesions linked to cell mutation). Heliocare can offer your patients acute photoprotection and more. The unique patented fernblock technology has proven superoxide anion anti-oxidant activity, a novel anti-ageing effect with proposed direct stimulation of collagen, langerhans cell preservation and protection against DNA damage which allows for comprehensive photoimmunoprotection. These benefits are complemented by a range of formulations, including the only available oral photoprotection agent, to suit individual needs and preferences.

HYDROPEPTIDE SPF 30 (BIOACTIVE BEAUTY)

Hydropeptide SPF 30 provides broad-spectrum protection from UVA and UVB rays with physical blockers. It contains titanium dioxide and zinc oxide and has color-adjusting spheres that help it blend perfectly with your client's skin tone and act similarly to a tinted bronzer. The product retails at £28 for 50mls and shields the skin from dangerous wrinkle-causing free radicals with acai and green tea. It also helps maintain a clearer complexion with medicinal galanga, niacin and aloe.

Image Skincare Daily Defense Matt Moisturiser SPF 30 (Skin Geeks)

Daily Defense Matt Moisturiser SPF 30 is a new generation, oil-free, pure physical broad spectrum UVA/UVB moisturiser that incorporates micro-sponge technology to absorb the skin's surface oils and leave it with a matte, non-greasy, shine free finish.

The product contains the potent anti-oxidant thioitane, as well as free radical scavengers to protect against environmental exposures. Other key ingredients include coated zinc oxide (18%), green tea extract, raxisomes (arabidopsis thaliana), photosomes (plankton extract) and BV-OSC (vitamin C). It is also water resistant and acts as an excellent make-up base. As with all products in the Image Skincare range, Daily Defense Matt Moisturiser SPF 30 is formulated without the use of parabens, petrochemicals and synthetic fragrances.
